

Blends seamlessly into
any system environment

Reliable connection

The integration connects your source systems to the Corporate Planning software.

Smooth data import

The transformation of the data and the import of structures are predefined.

Automated data flows

In planning, analysis or reporting, you will always be working with the latest data.

Direct access

The drill-down gives you quick and easy access to individual accounting entries and vouchers.

Integration of all your business data

Use the wide range of functions in the Corporate Planning software on the data supplied by your source systems too. Corporate Planner Connectivity Express automatically imports all the information you need for your corporate performance management tasks. Whenever values change in any of your connected systems, these will be updated automatically. This ensures that you always have all the current data at your disposal for planning, analysis and reporting. You save time and effort, and your processes become far less prone to error.

The principle of the single point of truth

The Corporate Planning solutions are integrated to run on a common technological platform. Within our system, each piece of information occurs only once and can easily be traced back from any factual reference to its origin. A drill-down provides you with direct access to your financial and cost accounting systems, to individual accounting entries as well as to the supporting vouchers stored in your document management system. You can thus always see straight away where your figures have come from.

Always up to date

Corporate Planner Connectivity Express connects more than 150 source systems to the Corporate Planning software. And, because we are rapidly developing integrations for new systems, our portfolio is expanding all the time. Even when source system versions change, you will not be at all inconvenienced. We are constantly monitoring the developments in the market and continually adjusting Corporate Planner Connectivity Express. This means that your integration is always up to date and you will always be working with the latest data.

Individual requirements

If one of your source systems is not yet included in our wide-ranging portfolio, we will be happy to develop the interface that suits your needs. In the process, we will of course be guided entirely by your specifications. Do you have any particular preferences regarding the data import procedure or other functionalities? That's absolutely no problem. Simply let us know what you are looking for, and together we will design a made-to-measure solution that is perfectly suited to you and your requirements.

Your advantages at a glance:

- ✓ planning, analysis and reporting with all the relevant data in just one system
- ✓ more reliability through automated data import
- ✓ transparency and traceability thanks to the single point of truth
- ✓ improved performance through compression and faster processing of the data
- ✓ an extremely safe investment: automatic updates whenever versions change
